### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Feldman on 5/19/04.

2. The application has been amended as follows:

Claim 22, line 2: "shape" was deleted and --article-- was inserted.

Claims 23-40: canceled.

3. The following is an examiner's statement of **reasons for allowance**:

With respect to claim 22, the prior art fails to teach or suggest a method of forming a complex aerodynamic and hydrodynamic article comprising conforming a honeycomb core to the shape and contour of a mold having an open surface by applying pressure to the top surface of the honeycomb wherein **before removing the pressure and before removing the honeycomb from the mold, the conformed honeycomb is cut substantially parallel to the open surface of the mold**, whereby the honeycomb has a thickness defined by a distance between the mold contour and the cut surface.

US 3196533 to Ida teaches abutting a honeycomb core against an open mold having an open surface and a contour and shape, conforming the honeycomb to the shape of the mold by applying pressure to the top surface of the honeycomb by means of an explosive charge or shock wave, removing the pressure, removing the conformed honeycomb from the mold, and cutting

the conformed honeycomb to its final shape (Figures 4-5 and 6-7; column 4, lines 25-27; column 4, lines 35-55; column 4, lines 65-66; column 6, lines 43-45; column 7, lines 5-8). However, the reference fails to teach or suggest cutting the honeycomb before removing the pressure, cutting the honeycomb before removing the honeycomb from the mold, and cutting the honeycomb substantially parallel to the open surface of the mold.

US 2855664 to Griffith teaches abutting a honeycomb core against a contoured mold, conforming the honeycomb to the shape of the mold by applying pressure to the top surface of the honeycomb by means of a cover and form plate, removing the pressure, and cutting the conformed honeycomb substantially parallel to the open face of the contoured mold such that the honeycomb has a thickness defined by a distance between the mold contour and the cut surface (Figures 3-4; column 1, lines 65-66; column 2, lines 11 and 31; column 2, lines 35-36). However, the reference fails to teach or suggest cutting the honeycomb before removing the pressure.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

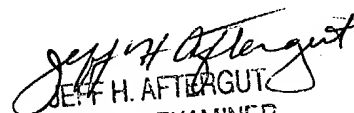

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Jessica L. Rossi** whose telephone number is **571-272-1223**. The examiner can normally be reached on M-F (8:00-5:30) First Friday Off.
